Software Systems for Growing Enterprises

SOFTWARE IMPLEMENTATION PROPOSAL

Enterprise POS, Inventory Management, and Accounting Integration System

Prepared For:	**Crispy King**
Scope:	39 Branches + Main Office
Prepared By:	Zapweb Technology Solutions
Date:	September 10, 2026

1. Executive Summary

Crispy King's scale — 39 branches supported by a single Main Office — calls for a robust, integrated software backbone rather than a patchwork of disconnected point solutions. This proposal outlines the implementation of an Enterprise Point of Sale (POS), Inventory Management, and Accounting Integration system purpose-built for multi-branch food and retail operations.

The solution standardizes retail operations at every branch, enforces strict inventory controls from central warehouse to till, and consolidates sales, cash, and inventory reporting at the Main Office in real time — giving management a single, trustworthy view of the entire business.

2. Project Objectives

- Standardize POS operations across all 39 branches for fast, accurate, and consistent checkout.
- Implement real-time, offline-first inventory management to track stock, minimize spoilage, and monitor intra-branch transfers.
- Fully integrate branch sales and inventory data into a centralized Main Office accounting system.
- Provide comprehensive sales, cash, and inventory reporting — from individual branches up to enterprise-level roll-ups.
- Give Main Office executives a live, consolidated view of performance across the entire branch network.

3. Key System Features

3.1 Point of Sale (POS) & Cash Management

- **Offline-First POS —** branches keep selling even when internet connectivity drops; transactions queue locally and sync automatically once the connection is restored.
- **Cash Management —** opening balances, cash drops, and register closures are tracked to prevent shortages and discrepancies at shift-end.
- **Multi-Payment Support —** cash, card, and digital wallet payments are processed through a single, unified checkout flow.

3.2 Enterprise Inventory System

- **Real-Time Stock Tracking —** stock is deducted automatically on every sale, preventing overselling and out-of-stock surprises.
- **Central Warehouse & Branch Receiving —** the Main Office dispatches stock directly to branches; branches receive and verify against purchase orders before it posts to inventory.
- **Waste & Spoilage Reporting —** damaged or expired items are logged before they erode margins — critical for a food-service operation at this scale.

3.3 Centralized Accounting & Reporting

- **General Ledger Integration —** sales transactions map automatically to the Main Office chart of accounts (Revenue, COGS, Cash).
- **Automated Journal Entries —** manual bookkeeping for branch sales and cash deposits is reduced to review-and-approve.
- **Executive Dashboard —** Main Office management views consolidated dashboards covering total revenue, top-performing branches, and low-stock alerts.

3.4 Core Accounting Journals & Ledgers

The system fully integrates the following accounting journals to keep financial tracking accurate and audit-ready across all 39 branches and the Main Office:

- **Cash Receipts Journal —** all incoming cash from retail sales, wholesale orders, and settled receivables.
- **Cash Disbursement Journal —** outgoing cash for branch-level petty cash, vendor payments, and operational costs.
- **Accounts Receivable —**outstanding customer balances, credit sales, and payment tracking.
- **Accounts Payable Journal —** unpaid supplier invoices, utility bills, and Main Office vendor obligations.
- **Sales Journal —** every branch sale is recorded automatically and posted to the correct revenue accounts.
- **Purchase Journal —** procurement of raw materials, food inventory, and supplies.
- **Inventory Journal —** real-time stock value, adjustments, spoilage, and intra-branch transfers, continuously balanced against COGS.

4. Architecture & Security

- **Multi-Tenant Role-Based Access —** Cashiers, Branch Managers, and Main Office Executives each get permissions scoped to their role.
- **Offline-First Sync —** branches run smoothly on local storage without waiting on the cloud, with background synchronization once connectivity is available.
- **End-to-End Encryption —** financial data and customer information are protected in transit and at rest.
- **Centralized, Auditable Data —** every branch transaction is traceable back to its source, supporting internal controls and external audit.

5. Implementation Strategy

Rollout is staged deliberately so issues surface — and are resolved — on a small pilot group before the system reaches the full branch network.

Phase	Scope	Duration
Phase 1	Pilot Launch (3 Branches) — software installation, hardware setup, and targeted staff training.	Weeks 1–4
Phase 2	Main Office Integration — connect pilot branches to the centralized accounting	Weeks 5–6

Phase	Scope	Duration
	module; validate reporting and journal automation.	
Phase 3	Phased Rollout (Remaining 36 Branches) — batch rollouts of 6–8 branches per week, with on-site go-live support.	Weeks 7–12

3-Month Rollout Timeline

The full engagement — from kickoff to all 39 branches live — is designed to complete within 3 months.

Month	Milestones	Branches Live
Month 1	Kickoff and discovery; software installation and configuration; hardware setup guidance; staff training; pilot branches go live.	**3 branches**
Month 2	Main Office integration connected to the centralized accounting module; reporting and journal automation validated; phased rollout begins in weekly batches of 6–8 branches.	**≈ 19 branches**
Month 3	Phased rollout continues and completes across the remaining branch network; on-site go-live support for each batch; final review, documentation, and handover to Main Office.	**39 branches (all live)**

6. Investment

The Core Platform License is a flat, one-time fee covering all 39 existing branches — it does not scale per branch for the current rollout. Per-branch onboarding pricing applies only to new branches Crispy King opens in the future.

Component	Description	Investment
Core Platform License (39 Branches)	One-time setup: POS, Inventory, and Accounting Integration modules, Main Office dashboard, configuration, data setup, and staff training — covers all 39 existing branches.	**₱250,000**
Future New Branches	Per-branch onboarding for any branch Crispy King opens after this rollout — configuration, data setup, and staff training.	**₱15,000 / branch**
Cloud Hosting & Support	Ongoing cloud infrastructure, offline-sync services, and technical support, billed per branch.	**₱650 / branch / month**

Total One-Time Investment (39 existing branches): ₱250,000, plus ₱650 × 39 = ₱25,350/month ongoing hosting & support.

Any branch opened after this rollout is onboarded at ₱15,000/branch (one-time) plus ₱650/month hosting & support, added from that branch's go-live date.

Figures above are illustrative planning estimates based on the stated scope; they are refined once branch hardware inventory, data-migration volume, and any custom integrations (e.g., existing accounting software, payment gateways) are confirmed during discovery.

Note: Travel expense will be billable to the client for the data gathering and onsite implementation, food and accommodation can be provided by the client, if not Zapweb will charge 1,300/day.

Payment Terms

- 50% down payment upon signing to begin Phase 1 (Pilot Launch).
- 30% upon successful Phase 2 completion (Main Office Integration).
- 20% upon full rollout completion (Phase 3, all 39 branches live).
- Cloud hosting & support billed monthly per active branch, starting from that branch's go-live date.

7. Competitor Price Comparison

For context, here is how this proposal compares to the realistic alternatives Crispy King would otherwise evaluate — a dedicated F&B POS SaaS platform, and generic enterprise ERP systems sized to a 39-branch operation.

Solution	Setup / Implementation	Monthly (39 branches)	Native Accounting?	Est. 3-Yr Total
Zapweb (this proposal)	₱250,000	₱25,350	Yes — built in	**≈ ₱1.16M**
StoreHub (F&B POS SaaS)	Hardware only, ~₱830K–1.35M	₱73,000–88,000	No — Xero/QuickBooks add-on	**≈ ₱4.0M–4.5M**
Odoo Enterprise (generic ERP)	≈ ₱2.3M–4.6M	≈ ₱64,000–96,000	Yes — generic, not F&B-specific	**≈ ₱4.6M–8.1M**
SAP Business One (enterprise ERP)	≈ ₱4.6M–14.3M	≈ ₱258,000–388,000	Yes — generic, not F&B-specific	**≈ ₱14M–28M**

- StoreHub and similar F&B POS platforms charge per-branch monthly subscriptions and require a separate Xero/QuickBooks subscription for full accounting — this proposal includes accounting natively at no extra recurring cost.
- Generic ERPs (Odoo, SAP Business One) are built for broad, cross-industry use and require significant customization to fit offline-first, branch-level F&B operations — their licensing and implementation costs scale steeply with user count.
- Figures above are planning-level estimates based on published vendor pricing and typical implementation ranges; they exclude POS hardware (terminals, printers, cash drawers, scanners), which is required under any of these options and is not part of this proposal's software investment.

8. Why Zapweb Technology Solutions

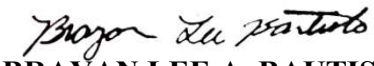

- 15+ years building fintech, cooperative management, and compliance-grade systems for Philippine SMEs.
- Deep, hands-on experience with offline-first architectures suited to branches with unreliable connectivity.
- Proven track record delivering integrated POS, inventory, and accounting systems for multi-branch retail and food-service clients.
- A single accountable team from discovery through go-live and ongoing support — no hand-offs between vendors.

9. Conclusion

Implementing this integrated POS, Inventory, and Accounting solution positions Crispy King to scale with confidence — giving Main Office executives an unprecedented, real-time view into branch performance while ensuring every branch operates reliably, day in and day out.

We welcome the opportunity to walk through this proposal in person and tailor the phased rollout to Crispy King's operating calendar.

Proposal Summary

A one-page recap of the Crispy King Enterprise POS, Inventory, and Accounting Integration proposal for quick reference.

Scope

- 39 branches + 1 Main Office, standardized on a single offline-first POS, inventory, and accounting platform.

What's Included

- Offline-first POS with cash management and multi-payment support at every branch.
- Real-time inventory with central warehouse dispatch, branch receiving, and waste/spoilage tracking.
- Centralized accounting: automated journal entries and General Ledger integration across all 7 core journals (Cash Receipts, Cash Disbursement, AR, AP, Sales, Purchase, Inventory).
- Main Office executive dashboard with consolidated revenue, top-branch, and low-stock reporting.
- Multi-tenant role-based access and end-to-end encryption.

Rollout

- Phase 1 (Weeks 1–4): Pilot launch — 3 branches.
- Phase 2 (Weeks 5–6): Main Office integration and validation.
- Phase 3 (Weeks 7–12): Phased rollout of the remaining 36 branches, 6–8 per week.

Investment

Core Platform License (covers all 39 existing branches)	**₱250,000**
Total One-Time Investment	
Cloud Hosting & Support — 39 × ₱650 / month	**₱25,350 / month**
Future new branches (after this rollout)	**₱15,000 / branch + ₱650/mo**

Payment terms: *50% on signing / 30% on Phase 2 completion / 20% on full rollout. Hosting billed monthly per active branch from go-live.*
